

# CURRICULUM VITAE

<b>Name</b>	<b>Thorge Janz</b>	
<b>E-mail / Website</b>	tjanz@tuta.io, www.tjanz.cv	
<b>GitHub</b>	<a href="https://github.com/tjanz-0">https://github.com/tjanz-0</a>	
<b>Address</b>	Heinrich-Fuchs-Str. 100, 69126 Heidelberg	
<b>Year and place of birth</b>	2003, Wolfsburg, Germany	
<b>Education</b>	<b>Heidelberg University (10.2022 - expected 12.2025)</b> BSc in Physics Institute of Computer Engineering (ZITI); European Institute for Neuromorphic Computing (EINC) Thesis Title: "Gradient-Based Training of Multi-Compartmental Neuron Models on BrainScales-2" (Access through <a href="https://www.kip.uni-heidelberg.de/optiqs/publications">https://www.kip.uni-heidelberg.de/optiqs/publications</a> )	Heidelberg, Germany
<b>Employment and work experience</b>	<b>Institute of Computer Engineering (ZITI)</b> Student Research Assistant European Institute for Neuromorphic Computing (EINC) Differentiable simulation and emulation of multi-compartmental neuron models with focus on the AdEx model, Gradient-based optimization of hardware model parameters on BrainScales-2 via development of an in-the-loop scheme based on results from simulation. (Linux/Windows, Python/GitHub)	Heidelberg, Germany November 2025 – present
<b>Independent Projects</b>	<b>Website</b> Personal website with digital portfolio (HTML, JS)	
	<b>Python</b> GARCH(1,1) vs. Random Forest in SOL/USDT volatility predictions (Access via my GitHub page)
